Second International Workshop on Multi-Paradigm Modeling for Cyber-Physical Systems – MPM4CPS'20

18 – 23 October 2020 – Satellite event at MoDELS 2020 – Montreal, Canada
https://msdl.uantwerpen.be/conferences/MPM4CPS/

Organizing Committee

Simon Van Mierlo, University of Antwerp – Flanders Make

Dominique Blouin, Télécom ParisTech

Moussa Amrani, Université de Namur

Julien Deantoni, Université Nice - Sophia Antipolis

Manuel Wimmer, JKU Linz

Steering Committee

Hans Vangheluwe, University of Antwerp – Flanders Make and McGill University

Pieter J. Mosterman, The Mathworks

Jeff Gray, University of Alabama

Vasco Amaral, Universidade Nova de Lisboa

Program Committee
(tentative, to be contacted)

Rima Al-Ali, Charles University

Shaukat Ali, Simula Research Laboratory

Francis Bordeleau, École de Technologie Supérieure

Frédéric Boulanger, CentraleSupélec and Laboratoire de Recherche en Informatique (LRI)

Loli Burgueño, Open University of Catalunia

Antonio Cicchetti, Mälardalen Research and Technology Centre (MRTC)

Federico Ciccozzi, Mälardalen University

Andrea d'Ambrogio, University of Rome Tor Vergata

Juan de Lara, Universidad Autónoma de Madrid

Joachim Denil, University of Antwerp

Ada Diaconescu, Télécom ParisTech

Juergen Dingel, Queen's University

Ferhat Erata, UNIT Information Technologies R&D Ltd.

Rahele Eslampanah, Izmir University of Economics

Holger Giese, Hasso Plattner Institute for Digital Engineering

Martin Gogolla, University of Bremen

Esther Guerra, Universidad Autónoma de Madrid

Robert Heinrich, Karlsruhe Institute of Technology

Sebastian Herzig, Caltech/Jet Propulsion Laboratory

Gabor Karsai, Vanderbilt University

Thomas Kühne, Victoria University of Wellington

Letitia W. Li, BAE Systems

Levi Lúcio, Fortiss

Eva Navarro-Lopez, University of Manchester

Oksana Nikiforova, Riga Technical University

Patrizio Pelliccione, Chalmers University, Gothenburg

Ahsan Qamar, Ford Motor Company

Akshay Rajhans, The Mathworks

Arend Rensink, Universiteit Twente

Rick Salay, University of Toronto

Bran Selic, Malina Software Corporation

Martin Törngren, KTH Royal Institute of Technology

Antonio Vallecillo, Universidad de Málaga

Tijs van der Storm, CWI

Daniel Varró, McGill University

Clark Verbrugge, McGill University

Andreas Wortmann, RWTH Aachen University

Tao Yue, Simula Research Laboratory

Justyna Zander, NVIDIA

Scope of the Workshop

Tackling the complexity involved in developing truly complex, designed systems is a topic of intense research and development. System complexity has drastically increased once software components were introduced in the form of embedded systems, controlling physical parts of the system, and has only grown in CPS, where the networking aspect of the systems and their environment are also considered. The complexity faced when engineering CPS is mostly due to the plethora of cross-disciplinary design alternatives and inter-domain interactions. To date, no unifying theory nor system design methods, techniques, or tools to design, analyze, and ultimately deploy CPS exist. Individual (physical systems, software, network) engineering disciplines offer only partial solutions and are no match for the complexity observed in CPS. Multi-Paradigm Modeling (MPM) offers a foundational framework for gluing the several disciplines together in a consistent way. The inherent complexity of CPS is broken down into different levels of abstraction and views, each expressed in appropriate modeling formalisms. MPM offers processes and tools that can combine, couple, and integrate each of the views that compose a system.

MPM encompasses many research topics - from language engineering (for DSLs, including their (visual) syntax and semantics), to processes to support multi-view and multi-abstraction modeling, simulation for system analysis, and deployment. The added complexity that CPS bring compared to embedded and software-intensive systems requires to look at these new applications and how MPM techniques can be applied or adapted to them, tying together multiple domains. Many remaining research questions require answers from researchers in different domains, as well as a unified effort from researchers that work on supporting techniques and technologies.

This workshop, the continuation of the successful MPM series of MoDELS workshops, is aimed at furthering the state-of-the-art as well as defining the future directions of this emerging research area by bringing together world experts in the field for an intense one-day workshop

Topics of interest (including, but not limited to)

- **Heterogeneous models:** multi-domain and multi-physics modeling, multi-view modeling, multi-abstraction modeling;
- **Heterogeneity in modeling languages:** "blended" textual/visual modeling, modular design of modeling languages, the modeling/formal analysis/simulation/synthesis of user interfaces;
- **Multi-Paradigm Modeling techniques:** model transformation, model composition and integration, modeling cross-domain interactions, model-based detection of unanticipated interactions in heterogeneous systems, (co-)simulation of heterogeneous models, machine learning applied to the design of CPS or their languages in an MPM context;
- **Taxonomies and Catalogues** of Multi-Paradigm Approaches**.**
- **Applications of and experience** with current MPM techniques, with a focus on Cyber-Physical Systems in domains such as automotive, aerospace, manufacturing, …

Contributions should clearly address the foundations of multi-paradigm modeling by demonstrating the use of models to achieve the stated objectives and discuss the benefits of explicit modeling.

Important dates

Paper submission deadline 24 July 2020
Notification of acceptance 14 August 2020
Workshop dates September 18-19 October 2020

Submission procedure

We accept three types of papers, submitted as PDF on EasyChair, with topics related to one of the Workshop's topic:
- **Full research papers** (10 pages) present a novel, innovative approach;
- **Short papers** (5 pages) present new ideas or early-stage research, extensively discuss the experiences of the researchers with an MPM approach or demonstrate a tool;
- **Extended abstracts** (1 page) for a "lightning talk" (possibly accompanied with a Poster), i.e. a short, focused talk that can spark lively debate.

Submissions will be peer reviewed by at least three members of the program committee.
Accepted Research and Short papers will be published with the main conference's workshop proceedings (Extended Abstracts will not be retained for publications).
